This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1 (currently amended) An imaging material comprising a support having disposed thereon:

- a) at least one image-forming layer that comprises gelatin, and
- b) at least one transparent electrically conductive antistatic layer that comprises electronically conductive polymer particles, a neutral-charge conductivity enhancer, and a polymeric binder comprising gelatin or gelatin derivatives.
- 2 (original) The imaging material of claim 1 wherein said electronically conductive polymer particles comprise from 5 to 95 weight % of the total weight of said at least one antistatic layer.
- 3 (original) The imaging material of claim 1 wherein said support is an unsubbed support.
- 4 (original) The imaging material of claim 1 wherein said neutral-charge conductivity enhancer is present in an amount from 0.02 to 90 weight % based on the total weight of said antistatic layer.
- 5 (original) The imaging material of claim 1 wherein said electronically conductive polymer particles comprise a pyrrole-, thiophene-, or aniline-containing polymer.
- 6 (previously amended) The imaging material of claim 1 wherein said antistatic layer comprises electronically conductive polymer particles of a polythiophene present in a cationic form with a polyanion, said polythiophene comprising recurring units defined by the following Formula I wherein n is about 5 to 1000 and wherein R1 and R2 are independently hydrogen or a substituted or unsubstituted alkyl group having 1 to 4 carbon atoms, or together form a

substituted or unsubstituted group or a substituted or unsubstituted 1,2-cyclohexylene group:

$$\begin{bmatrix} R^1 & O & R^2 \\ & & & \\ & & & \end{bmatrix}$$

7 (original) The imaging material of claim 1 wherein said antistatic layer is a subbing layer on said support and has at least one additional layer disposed thereon.

8 (currently amended) The imaging material of claim 1 wherein said neutral-charge conductivity enhancer is:

## (A) represented by the following Formula II: (OH)n-R-(COX)m

II

wherein m and n are independently an integer of from 1 to 20, R is an alkylene group having 2 to 20 carbon atoms, an arylene group having 6 to 14 carbon atoms in the arylene chain, a pyran group, or a furan group, and X is -OH or -NYZ, wherein Y and Z are independently hydrogen or an alkyl group;, or

- (B) a sugar, sugar derivative, polyalkylene glycol, or glycerol compound; or
- (C) is selected from the group consisting of N-methylpyrrolidone, pyrrolidone, caprolactam, N-methyl caprolactam, or N-octylpyrrolidone.

9 (original) The imaging material of claim 8 wherein said neutral-charge conductivity enhancer is a N-methylpyrrolidone, pyrrolidone, caprolactam, N-methylcaprolactam, N-octylpyrrolidone, sucrose, glucose, fructose, lactose, sugar alcohol, 2-furan carboxylic acid, 3-furan carboxylic acid, sorbitol, glycol, ethylene glycol, glycerol, diethylene glycol, or triethylene glycol, or a mixture of any two or more of these compounds.

10 (original) The imaging material of claim 9 wherein said neutral-charge conductivity enhancer is N-methylpyrrolidone, pyrrolidone, caprolactam, N-methyl caprolactam, or N-octylpyrrolidone.

11 (original) The imaging material of claim 9 wherein said neutral-charge conductivity enhancer is ethylene glycol, diethylene glycol or glycerol.

12 (original) The imaging material of claim 6 wherein said polyanion is polystyrene sulfonic acid.

13 (original) The imaging material of claim 9 wherein said neutral-charge conductivity enhancer is one or more than one compound selected from the group consisting of N-methylpyrrolidone, sorbitol, ethylene glycol, glycerol, and diethylene glycol.

14 (original) The imaging material of claim 9 wherein said neutral-charge conductivity enhancer is ethylene glycol, glycol or glycerol.

## 15-18 (cancelled)

19 (original) The imaging material of claim 1 wherein said electronically conductive polymer particles exhibit a packed powder specific resistivity of 105 ohm·cm or less.

20 (original) The imaging material of claim 1 wherein said electronically conductive polymer particles have a mean diameter of  $0.5\,\Box m$  or less.

21 (original) The imaging material of claim 1 wherein said electronically conductive polymer particles have a mean diameter of  $0.1 \square m$  or less.

- 22 (original) The imaging material of claim 1 wherein said electronically conductive polymer particles are present in said antistatic layer at a dry coverage of from 0.002 to 0.5 g/m2.
- 23 (original) The imaging material of claim 22 wherein said electronically conductive polymer particles are present in said antistatic layer at a dry coverage of from 0.003 to 0.1 g/m2.
- 24 (original) The imaging material of claim 1 wherein said at least one antistatic layer has a surface electrical resistivity of less than 1 x 1012 ohm per square.
- 25 (original) The imaging material of claim 24 wherein said at least one antistatic layer has a surface electrical resistivity of less than 1 x 1010 ohm per square.
- 26 (original) The imaging material of claim 24 wherein said at least one antistatic layer has a surface electrical resistivity of less than  $1 \times 108$  ohm per square.
- 27 (original) The imaging material of claim 1 wherein said support comprises a poly(ethylene terephthalate), poly(ethylene naphthalate), or cellulose acetate film, or an uncoated, resin coated, laminated, or synthetic paper.
- 28 (original) The imaging material of claim 1 wherein said antistatic layer further comprises an antihalation composition.
- 29 (original) The imaging material of claim 1 comprising at least one of said antistatic layers on each side of said support.
- 30 (original) The imaging material of claim 1 wherein said at least one image-forming layer comprises a photosensitive silver halide.

- 31 (original) The imaging material of claim 30 wherein said at least one photosensitive silver halide-containing layer is on the same side of the support as said antistatic layer.
- 32 (original) The imaging material of claim 30 wherein said at least one photosensitive silver halide-containing layer is on the opposite side of the support as said antistatic layer.
- 33 (original) The imaging material of claim 31 wherein said photosensitive silver halide-containing layer is underneath said antistatic layer.
- 34 (original) The imaging material of claim 31 wherein said photosensitive silver halide-containing layer is disposed over said antistatic layer
- 35 (original) The imaging material of claim 1 comprising at least one image-forming layer on each side of said support.
- 36 (original) The imaging material of claim 31 comprising at least one photosensitive silver halide-containing layer on each side of said support.
- 37 (original) The imaging material of claim 36 comprising at least one of said antistatic layers on each side of said support.
- 38 (original) The imaging material of claim 1 wherein said imageforming layer is a non-silver halide imaging layer.
- 39 (original) The imaging material of claim 1 wherein said imageforming layer is a thermally imageable layer.
- 40 (original) The imaging material of claim 1 wherein said imageforming layer is a photosensitive, thermally developable layer.

- 41 (original) The imaging material of claim 1 wherein said imageforming layer is a electrophotographic imaging layer.
- 42 (original) The imaging material of claim 1 wherein said imageforming layer is a black-and-white photographic silver halide emulsion layer.
- 43 (original) The imaging material of claim 1 wherein said at least one image-forming layer is a color photographic silver halide emulsion layer.
- 44 (original) The imaging material of claim 1 wherein said imageforming layer is a thermal head or laser transfer donor or receiving layer.
- 45 (original) The imaging material of claim 1 that is a black-and-white photographic film or paper.
- 46 (original) The imaging material of claim 43 that is a black-and-white radiographic film.
- 47 (original) The imaging material of claim 1 that is an infrared radiation sensitive imaging or scannable material.
- 48 (original) The imaging material of claim 1 that is a color photographic color negative or reversal film, color motion picture film or print, or a photographic color paper.
